(15 figs. omitted) 31 refs. Order from LC or SLA ml\$3.90, ph\$10.80 61-19233	61-19233 1. Mining engineering-- Hazards 2. Coal--Production 3. Seismic waves--Analysis 4. Title: Blowout I. Antsyferov, M. S. II. Konstantinova, A. G. III. Geological Survey, Denver, Colo.
Trans. of Akademiya Nauk SSSR Geofizicheskiy Institut, Trudy, 1956, no. 34(161) p. 243-268.	160934
The analysis of seismo-acoustic processes anticipating blowouts suggests that the prognosis of the approaching moment of a blowout is possible from an acceleration of the seismo-acoustic activity of the coal seam. More- over, the most characteristic indication of "blowout danger" of the seam is not so much the travel velocity of seismo-acoustic impulses as the amount of energy released per unit time in the fracture-forming process.
